Interfor’s Inland Hem-Fir lumber is made with fine-grained fiber from the forests of British Columbia’s Southern Interior. Inland Hem-Fir products come in a variety of grade options that can be used for structural, appearance and remanufacturing applications — ensuring you have the best product for your next project.
Interfor Inland Hem-Fir LUMBER

Best Choice for Performance and Quality
Interfor’s Inland Hem-Fir* is made up mainly of Western Hemlock, one of the most versatile softwood species. Its strength properties are comparable to D-Fir-L (N) making it an excellent lumber product for structural framing and trusses. Inland Hem-Fir is also easily pressure treated and can be used for decks and other outdoor uses.

Inland Hem-Fir is produced at Interfor’s state-of-the-art mills in Adams Lake and Castlegar, BC. The lumber is precision manufactured and machine graded, creating top-quality products that won’t let you down.

Best Choice for the Appearance
For those seeking wood with a very light color, Inland Hem-Fir is often considered the most desirable of the Western softwoods. It is as light or lighter in color than some of the Western Pines but stronger. This pitch-free product is very fine grained and even textured with small inter-grown knots.

Best Choice for the Environment
Wood from responsible sources is by far the best building choice. Our Inland Hem-Fir lumber comes from forests independently certified to the Sustainable Forestry Initiative Inc. (SFI®) standard and is produced in mills with SFI and PEFC chain-of-custody.
